

IN THE CLAIMS

1. (Original) System for downloading multimedia content to a terminal (50; 60, 70), characterized in that the downloading is carried out via a mobile telephony network (10), the said terminal (50; 60, 70) being able to be connected to the mobile telephony network (10), the said system comprising a voice recognition device (40), a database (30) connected to the network (10) and containing multimedia files, the terminal (50; 60, 70) being able to transmit a voice request emanating from the user to the voice recognition device (40) and the voice recognition device (40) is able to interpret the request that it receives and to return to the terminal (50; 60, 70) one or more interpretation prompt(s) designating one or more file(s) contained in the database (30), the terminal being able to return a prompt selected by the user, thereby bringing about the downloading of a multimedia file corresponding to the prompt selected from the database (30) to the terminal (50; 60, 70) via the mobile telephony network (10).

2. (Original) System according to claim 1, characterized in that the voice recognition device (40) is able to generate and transmit to the terminal (50; 60, 70) a list containing several most probable interpretation prompts.

3. (Original) System according to claim 2, characterized in that the prompts being associated with probabilities of correspondence with the user's request, the prompts of the list of prompts are ranked according to their order of probability.

4. (Previously Presented) System according to claim 1, claim 2 or claim 3, characterized in that the prompts are transmitted to the terminal (50; 60, 70) in the form of hypertext links tied with multimedia files contained in the database (30), the user being able to activate the link corresponding to his request.

5. (Previously Presented) System according to claim 1, characterized in that it comprises means for recording the voice request.

6. (Previously Presented) System according to claim 1, characterized in that the terminal (50) is a mobile terminal having a voice channel and/or a data channel.

7. (Previously Presented) System according to claim 1, characterized in that the terminal (50) includes an Internet browser.

8. (Previously Presented) System according to claim 1, characterized in that it comprises means for activating or deactivating the mode of operation with return of interpretation prompt(s) to the terminal (50; 60, 70) and:

in the case where this mode of operation is activated, the voice recognition device (40) is able to return one or more interpretation prompt(s) to the terminal (50; 60, 70),

in the case where this mode of operation is deactivated, the voice recognition device is able to transmit an interpretation directly to a server (50) for access to the database.

9. (Original) System according to claim 8, characterized in that the terminal (50; 60, 70) comprises means for measuring a parameter relating to the quality of the network and as a function of this parameter, activating or deactivating the mode of operation with return of prompt(s).

10. (Original) System according to claim 8, characterized in that the means for activating or deactivating the mode of operation with return of prompt(s) to the terminal (50; 60, 70) can be actuated by a user of the terminal (50; 60, 70).

11. (Original) Process for downloading multimedia content to a terminal (50; 60, 70), characterized in that the downloading is carried out via a mobile telephony network (10), the said terminal being able to be connected to the mobile telephony network (10), said process comprising the steps according to which:

a user transmits a signal corresponding to a verbal request to a voice recognition device (40) from a terminal (50; 60, 70) via the mobile telephony network (10),

the voice recognition device (40) processes the signal and returns to the terminal (50; 60, 70) one or more interpretation prompt(s) designating one or more multimedia file(s) contained in a database (30) connected to the network (10),

the user selects the prompt corresponding to the verbal request, thereby bringing about the downloading of a multimedia file corresponding to the prompt selected from the database (30) to the terminal (50; 60, 70) via the mobile telephony network (10).

12. (Original) Process according to claim 11, characterized in that the voice request signal is a voice or data signal.

13. (Previously Presented) Process according to claim 11, or claim 12, characterized in that the prompts are returned from the database (30) to the terminal (50; 60, 70) in the form of a text message.

14. (Previously Presented) Process according to claim 11, or claim 12, characterized in that the prompts are returned from the database (30) to the terminal (50; 60, 70) in the form of a voice message transmitted as a sound file or by audio streaming.

15. (Previously Presented) Process according to claim 11, characterized in that the prompts are presented by the terminal (50; 60, 70) in a descending order of probability of correspondence with the request.

16. (Original) Process according to claim 13, characterized in that a prompt is selected by positioning a cursor over this prompt then by pressing an enable key of a keypad associated with the terminal (50; 60, 70).

17. (Previously Presented) Process according to claim 11, characterized in that the user selects a prompt by scrolling prompts down to the one whose selection is desired and then by pressing an enable key of a keypad associated with the terminal (50; 60, 70).

18. (Previously Presented) Process according to claim 11, characterized in that the user selects a prompt by pressing a key of a keypad associated with the terminal (50; 60, 70) identifying this prompt.

19. (Previously Presented) Process according to claim 11, characterized in that the user selects a prompt by verbally pronouncing a reference identifying this prompt.

20. (Previously Presented) Process according to claim 11, characterized in that the user selects a prompt by positioning a stylus on a touch screen associated with the terminal, at the level of the relevant prompt.

21. (Previously Presented) Process according to claim 11, characterized in that when none of the prompts is selected, the operation of processing the request by the voice recognition device (40) is repeated while eliminating the unselected prompts from a list of expressions that the voice recognition device (40) may comprise.

22. (Currently Amended) Process according to claim 21, characterized in that having recorded the voice request beforehand, the operation of processing the request by the voice recognition device~~this new processing operation~~ is carried out on the basis of the initial recorded request.

23. (Currently Amended) Process according to claim 21, characterized in that the operation of processing the request by the voice recognition device~~this new processing operation~~ is carried out on a new request.

24. (Original) Process according to claim 23, characterized in that when none of the prompts is selected, the new request is formulated in text or graphics mode.

25. (Previously Presented) Process according to claim 11, characterized in that a mode of operation with return of prompt(s) to the terminal (50; 60, 70) is activated beforehand.
